Working with Open SQL

SQL in ABAP

SQL Statements

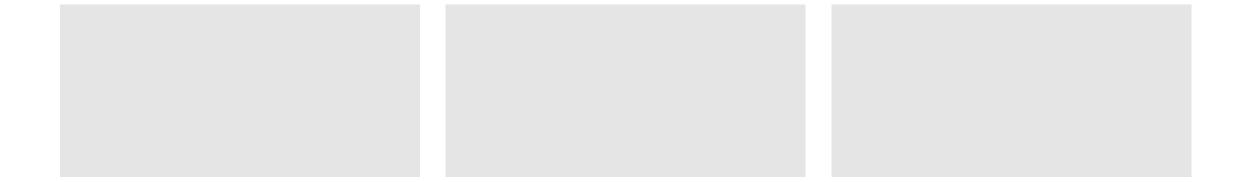

SELECT | INSERT | UPDATE | DELETE

MS-SQL | Oracle | IBM DB2 | MAXDB

Open SQL

Open SQL

Subset of the Standard SQL statements

Fully integrated within ABAP

Set of **ABAP statements**

Enables data access within the database

Independent from any database

SELECT vbak~vbeln vbak~ernam vbak~auart

vbap~posnr vbap~matnr vbap~matkl

INTO TABLE @DATA(sales_documents)

FROM vbak JOIN vbap ON vbap~vbeln = vbak~vbeln

WHERE vbak~erdat = '20160312'.

Write Once. Run Anywhere.

Use only Open SQL as far as possible.

```
DATA total_flight_time TYPE i.

EXEC SQL.

SELECT SUM(fltime)

INTO :total_flight_time

FROM spfli

ENDEXEC.
```

Native SQL

```
DATA total_flight_time TYPE i.

EXEC SQL.

SELECT SUM(fltime)

INTO :total_flight_time

FROM spfli

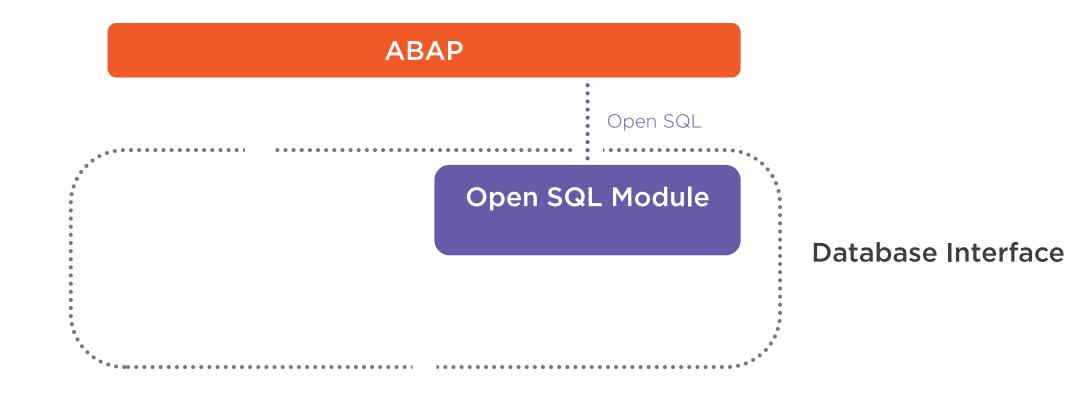

ENDEXEC.
```

Native SQL

Try to avoid as far as possible

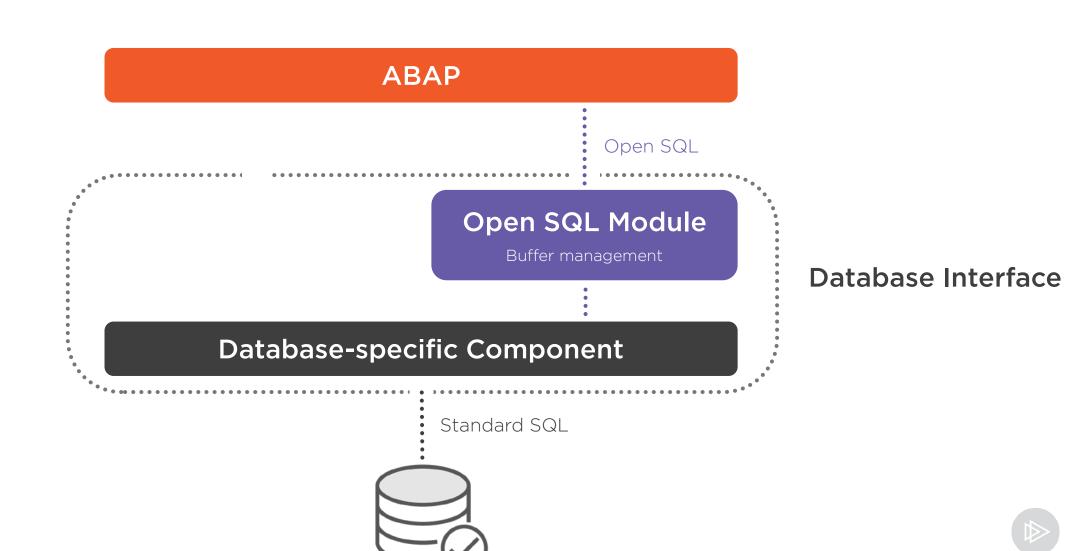

Database Interface

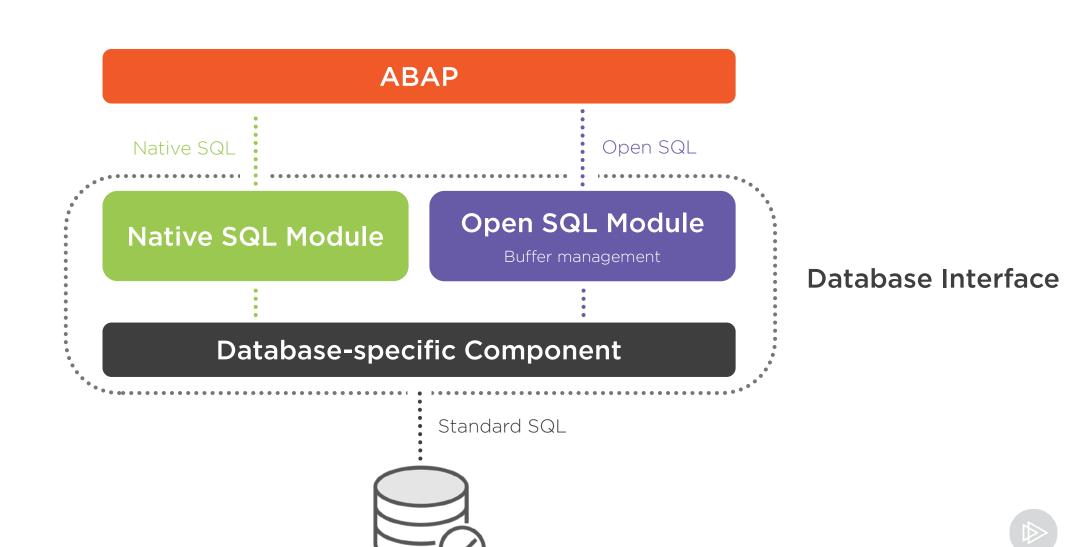

Database Interface

Database Interface

Use only Open SQL as far as possible.

Next

Summary

Use only Open SQL as far as possible.

Summary

Developing in ABAP is different

- No need for checking in and out
- Repository is always up-to-date

Develop, Test and Run

- Deploy changes with transports
- Transport is just a copy process

SAP stores ABAP code in the database

- ABAP Runtime loads and interprets
- Operating system independent

Subset of the Standard SQL statements

- Fully integrated within ABAP
- Database Interface

Developing in ABAP is different

Next Module

Introducing the ABAP Workbench

- Transport is just a copy process

SAP stores ABAP code in the database

- ABAP Runtime loads and interprets
- Operating system independent

Subset of the Standard SQL statements

- Fully integrated within ABAP
- Database Interface
